

**RC-3**

## Remote Control with XTRAC™ Quick-Lock System

The new design RC-3 has been redesigned to take full advantage of Topcon's X TRAC technology.

Utilizing a larger transmit/receive window the RC-3 has almost doubled quick lock range from robotic base to the rover pole.

Designed to sit atop a new 360° prism assembly, the RC-3 communicates wirelessly via an internal Bluetooth connection to the Field Controller. Designed with maximum uptime in mind, the new RC-3 uses the same camcorder batteries that the Field Controller does.

Smaller-Lighter-Faster-Longer is what the new RC-3 remote system is all about.

### Features Include:

- 6-channel functionality
- New quick-snap pole mount
- Internal Bluetooth
- Camcorder style batteries like those in FC-100s
- 400m Range
