Shaping New Dimensions

Drive productivity across the civil construction process with Tokara™ tracking, remote service and site management solutions.

At Position Partners, we recognise that every project, site and customer has unique requirements, so we have created a modular solution to meet the evolving demands of your business. Tokara comprises three service platforms: Tokara Tracking; Tokara Service; and Tokara Site - powered by SiteLINK 3D. Each platform works from the same hardware, so you can upgrade at any time and with no fuss.

“With the power to monitor, service and control your assets from the office and in real-time, Tokara guarantees a safer and more efficient working environment.”

Because we are not aligned to a specific machinery manufacturer, Tokara delivers ‘whole site’ solutions that work with any type, make and model of machine. Tested and developed for the Australian market (Tokara is an Aboriginal word meaning ‘track’), you can be assured of a solution that works in our harsh environment and despite challenging telecommunication networks.

Tokara Tracking

Improve machine utilisation with customised tracking and condition reporting across your fleet.

Tokara Service

Minimise downtime and eliminate service call-outs with remote service on any Tokara enabled machine.

Tokara Site

Streamline the entire project management process with end-to-end planning, monitoring and reporting across all assets.

Tokara Tracking

Improve machine utilisation and Return on Investment (ROI) with Tokara Tracking. Built in Australia and designed specifically for civil construction and mining, Tokara Tracking is a powerful tool that enables you to monitor a huge variety of machine data in real-time and increase performance across the fleet.

- At a glance, see where your assets are with custom mapping that works off the current design file
- Save money by reducing diesel idle times and identifying and reallocating poorly performing assets with powerful optimisation reporting
- Automate the reporting process – create reports for management, asset and service staff that link tracking data with internal databases

- Ensure you're getting the most from every machine with statistics on engine hours, speed, position, KMs travelled and more. Claim back tax by recording KMs
- Increase efficiency with powerful two-way messaging terminal to log jobs, compaction, duress and send/receive email alerts
- Improve productivity by monitoring operator behaviour with custom alerts and statistics
- Robust Australia-wide coverage that utilises the Telstra NextG™ network and Iridium satellite system

Optimise your fleet

Tokara Service

Think of the money you could save if you didn't have to call out service technicians! Tokara Service is designed to do exactly that: save you money by providing real-time remote access to Topcon machine control products. Using a simple web interface, technicians can change settings, update firmware and train operators in real-time and from anywhere.

- Save money by reducing service callouts and solving issues remotely – eliminate the need for just one callout and the service has paid for itself!
- Ensure all machines are working on the latest design file and stay safe by transmitting updates from the office
- Take preventative measures to reduce system failures by monitoring diagnostics and identify hardware faults so you can quickly swap in replacement parts

Service technicians can change settings, update firmware and train operators in real-time and from anywhere

Connect in real-time

Tokara Site

– powered by SiteLINK 3D

Tokara Site enables you to supervise and control the entire site remotely, helping you increase performance and site safety. Get up-to-the-second updates on the site's earth works progress and link all machinery and survey rovers to give a realistic 'big picture' overview.

- View the entire site remotely and in real-time with as con, 3D visualisation technology
- Improve efficiency by transferring data files to all machines and rovers and linking machine operations with surveying
- Monitor, access and control machine control systems instantly and remotely to minimise downtime

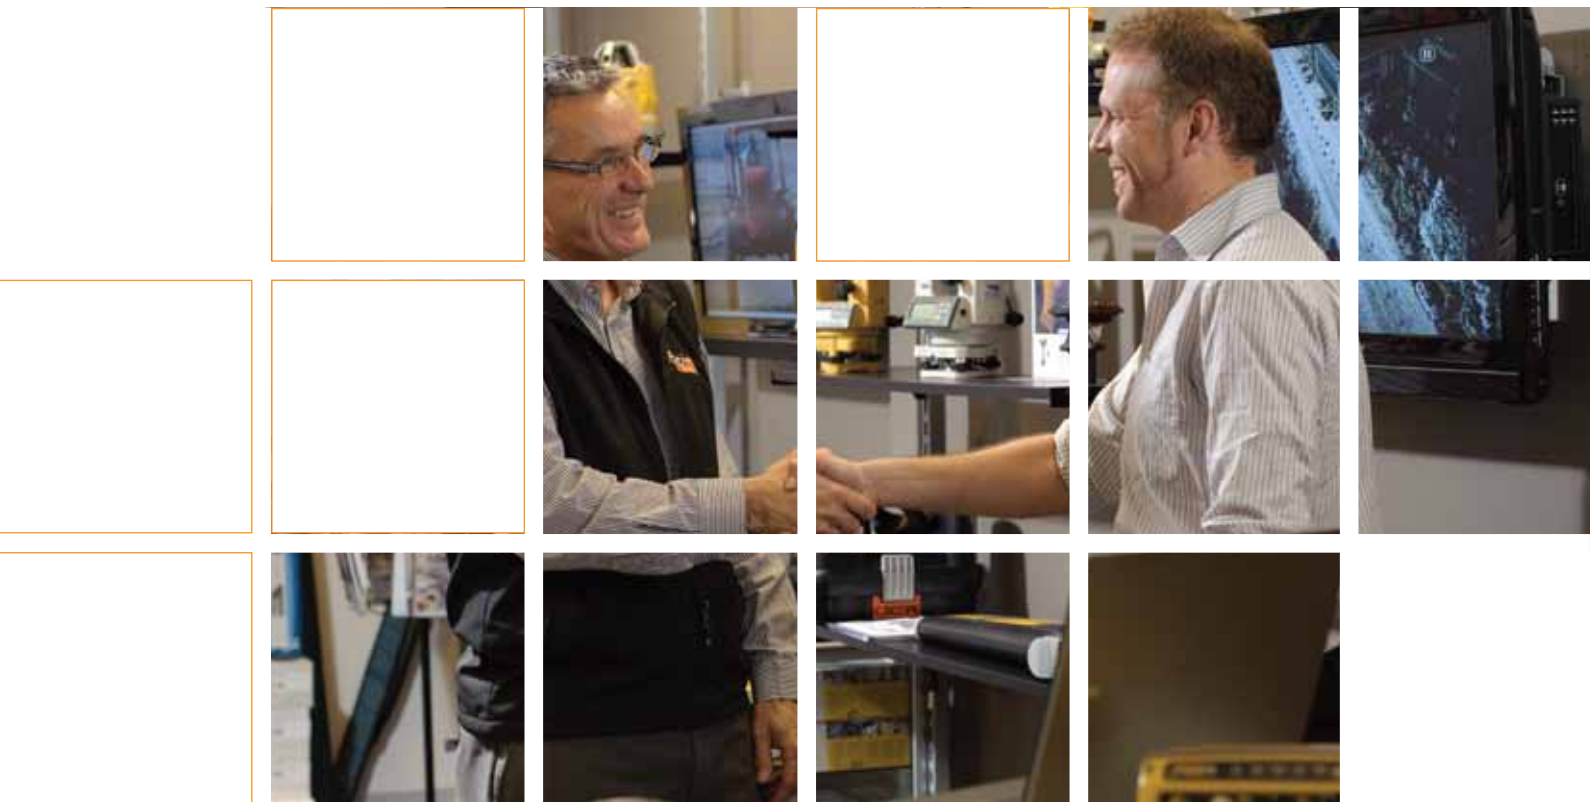

- Powerful, customisable reporting software to help you stay ahead of schedule
- Real-time cut/fill reporting allows you to monitor productivity by the second
- Operators can see all other machine locations and communicate with one another via SMS, saving time and increasing safety and productivity

Control the big picture

About Position Partners

With offices in every state and around 150 people, Position Partners is the largest Australian-owned company focussing entirely on the distribution and support of positioning and machine control solutions for land management, civil works and building projects. Position Partners is committed to increasing productivity for customers and building lasting business relationships around high calibre positioning activities.

Position Partners is Topcon's exclusive Australian partner for machine control and positioning systems. A full range of leading instruments and systems is backed by unrivalled service and industry expertise to give customers the support they need for any project.
